50540/FLC/C766 - CIT3728

ABSTRACT OF THE DISCLOSURE

A multi-agent autonomous system for exploration hazardous or inaccessible locations. The multi-agent autonomous system includes simple surface-based agents or craft controlled by an airborne tracking and command system. airborne tracking and command system includes instrument suite used to image an operational area and any craft deployed within the operational area. The image data is used to identify the craft, targets for exploration, obstacles in the operational area. The tracking and command system determines paths for the surface-based craft using the identified targets and obstacles and commands the craft using simple movement commands to move through the operational area to the targets while avoiding the obstacles. includes its own instrument suite to collect information about the operational area that is transmitted back to the tracking 20 The tracking and command system may be and command system. further coupled to a satellite system to provide additional image information about the operational area and provide operational and location commands to the tracking and command system.
